

Melamine Marker Board

Use Dry Erase or Water Based Markers Only!

1. Wash with clean water, using a clean soft cloth.
2. Remove any stubborn dirt or stains with a mild liquid detergent, or a very mild powered hand soap, such as an automatic dishwasher soap.

Do not use abrasive cleaners, abrasive pads, or scouring powders. Old or set stains may require a solvent to soften. If a solvent is used, follow with a mild powered hand soap and rinse as in part #3.

3. Rinse thoroughly with clean water and let surface air dry. *Do not wipe dry with a cloth or a sponge.*
4. When an oil based or permanent marker has created stains, many times the stain can be removed by tracing the marks with a dry erase marker.
5. When step 4 does not work, use a mild solution of bleach and water to clean the surface. Let air dry.
6. For occasional cleaning, use a non oil based solution such as a glass cleaner.

Chalkboard

1. All chalkboards will provide better and longer performance if seasoned before use:
 - a. With the side of a piece of chalk, rub the entire surface of the board.
 - b. Erase board with a clean chalkboard eraser followed by a clean, dry, soft cloth. The writing surface will now be slightly gray rather than deep colored. This permits the writing to be clearly visible without light reflections as well as easily erased.
 - c. Repeat steps a and b above.
 - d. The longer the chalkboard is used the easier it will be to erase.
2. These chalkboards may be washed with water without damage to the writing surface. Use a clean sponge or rag with plenty of clean water to thoroughly wash all traces of chalk from the board. Rinse sponge in clean water and repeat a second time. Wring sponge dry and wipe entire board removing excess water.

BREAK IN CHALKBOARD AS ABOVE AFTER EACH WASHING.

3. *DO NOT USE* any gummed or adhesive tape on writing surface of chalkboards.
4. Clean daily with a good chalkboard eraser. Use a good chalk that is free from grit and grease.
